Tomáš Gonda

Researcher in Applied Category Theory and Quantum Information Theory

tomas.gonda@uibk.ac.at Innsbruck, Austria tomasgonda.org

0000-0002-1531-0058 Google Scholar

Education

PhD **Perimeter Institute & University of Waterloo**, Physics, Quantum Information Theory — Waterloo, ON, Canada, Sept 2017 – Nov 2021
- Thesis: *Resource Theories as Quantale Modules*
- Supervisor: Dr. Robert W. Spekkens

MSc & PSI (Perimeter Scholars International) **Perimeter Institute & University of Waterloo**, Theoretical Physics — Waterloo, ON, Canada, Aug 2016 – June 2017
- Thesis: *Resource Theoretic Approach to Causal Inference*
- Supervisor: Dr. Robert W. Spekkens

BSc **University of Edinburgh**, Mathematics & Physics — Edinburgh, Scotland, Oct 2013 – May 2016
- First class honours, 92% average grade
- Thesis: *Symplectic Geometry*
- Supervisor: Dr. Johan Martens

Experience

University of Innsbruck, Senior postdoctoral researcher — Innsbruck, Austria, Mar 2025 – present, 1 year 1 month
Independent research in applied category theory and quantum information theory.
- Algebra group, led by Tim Netzer
- Funded by my FWF ESPRIT Grant Ergodic Theory in Categorical Probability

University of Innsbruck, Postdoctoral researcher — Innsbruck, Austria, Jan 2022 – Feb 2025, 3 years 2 months
Conducting research in applied category theory and quantum information theory.
- Mathematical quantum physics group, led by Gemma De Les Coves

Applied Category Theory Adjoint School, Supervisor / teaching assistant — Oxfork, UK, June 2024
Co-leading a summer school research project with Paolo Perrone.
- Topic: *Modelling Uncertainty with Markov Categories*

University of Waterloo & University of Innsbruck, Supervisor / project lead — varied, 2022 – present, 4 years
Supervising Master's thesis projects of:
- Yìlè Yīng (MSc, 2022, co-supervised by RW Spekkens); *Asymmetry Trade-off Relations: A New Kind of Uncertainty Relations*
- Stefan Kremminger (MSc, 2024); *Quantum Conditional Independence*

University of Waterloo, Teaching assistant — Waterloo, ON, Canada, 2017 – 2021, 4 years
- Conducting tutorials for graduate level courses in Quantum Theory and Statistical Physics.
- Supervising multiple Master's level winter school projects in Quantum Foundations.

ETH Zürich, Visiting researcher — Zürich, Switzerland, Summer 2019
Collaborating with researchers in the group of Renato Renner on topics in information theory.

InstaEDU, Online tutor — remote
Online tutoring of undergraduate students in science and engineering. — 2013 – 2016, 3 years

University of Edinburgh, Career development internship — Edinburgh, Scotland
A summer project on modelling turbulence in Matlab. — Summer 2015
- Topic: *Transition to turbulence in plane Couette flow*

Personal tutor — Bratislava, Slovakia
In-person tutoring of high school students. — 2012 – 2013, 1 year

Volunteering

Scientific Journals, Reviewer — remote
Reviewing manuscripts for:
- Philosophy of Science (1)
- Quantum (3)
- Compositionality (2)
- Journal of Pure and Applied Algebra (1)
- Journal of Mathematical Physics (1)
- various conference submissions.

Positive Futures Festival, Organizer — Innsbruck, Austria
Co-organizing an annual two week long music festival with ~40 concerts and ~1000 attendees. — 2024 – present

Touch&Play Cologne Festival, Organizer — Germany
Co-organizing and facilitating an annual week long retreat with ~100 attendees. — 2025 – present

Awards

ESPRIT Grant Ergodic Theory in Categorical Probability — Mar 2025
The ESPRIT Grant supports young independent researchers in Austria.
Austrian Science Fund
www.fwf.ac.at/forschungsradar/10.55776/ESP3451824

Napier Medal and Gangadhar Balwant Gadgil Prize — 2016
Awarded to the best student in the Year 4 of the Mathematics program at the University of Edinburgh.
University of Edinburgh

Nichol Foundation Scholarship — 2015
Awarded to the best overall mark in the Year 3 of Physics degrees at the University of Edinburgh.
University of Edinburgh

Kelland Memorial Prize — 2014
Awarded for distinguished performance for direct entrants into the Second year of the program.
University of Edinburgh

Selected Publications

Empirical measures and strong laws of large numbers in categorical probability
We introduce axioms for empirical sampling morphisms, which are abstract notions of empirical measures within the framework of categorical probability. Using these, we prove abstract versions of the de Finetti theorem, the Glivenko–Cantelli theorem, and the strong law of large numbers, and show that classical results are recovered via the category of partial Markov kernels.
Tobias Fritz, Tomáš Gonda, Lorenzin, Antonio, Perrone, Paolo, Mohammed, Areeb Shah
arxiv.org/abs/2503.21576

De Finetti's theorem in categorical probability
A novel proof of de Finetti's Theorem characterizing permutation-invariant probability measures of infinite sequences of variables. The proof is phrased in the language of Markov categories, which provide an abstract categorical framework for probability and information flow. The diagrammatic and modular nature of the arguments makes the proof intuitive and easy to follow.

Epistemic horizons from deterministic laws: Lessons from a nomic toy theory
A study of what embedded observers can learn about the rest of the world made up of classical particles. We show that, in spite of deterministic physical laws, they face an epistemic horizon — properties such as position and momentum cannot be known simultaneously.

A framework for universality in physics, computer science, and beyond
First steps towards an abstract theory of universality, generalizing universal Turing machines, universal spin systems, completeness for complexity classes,and much more.
Tomáš Gonda, Tobias Reinhart, Sebastian Stengele, Gemma De Les Coves
compositionality.episciences.org/14134

Monotones in general resource theories
Resource theories offer an abstract framework for comparing resources for all kinds of tasks. We provide a general theory for quantifying the cost and yield of a resource, generalizing a plethora of known constructions.
